

How to draw a floor plan using Wall tool or Room tool from scratch

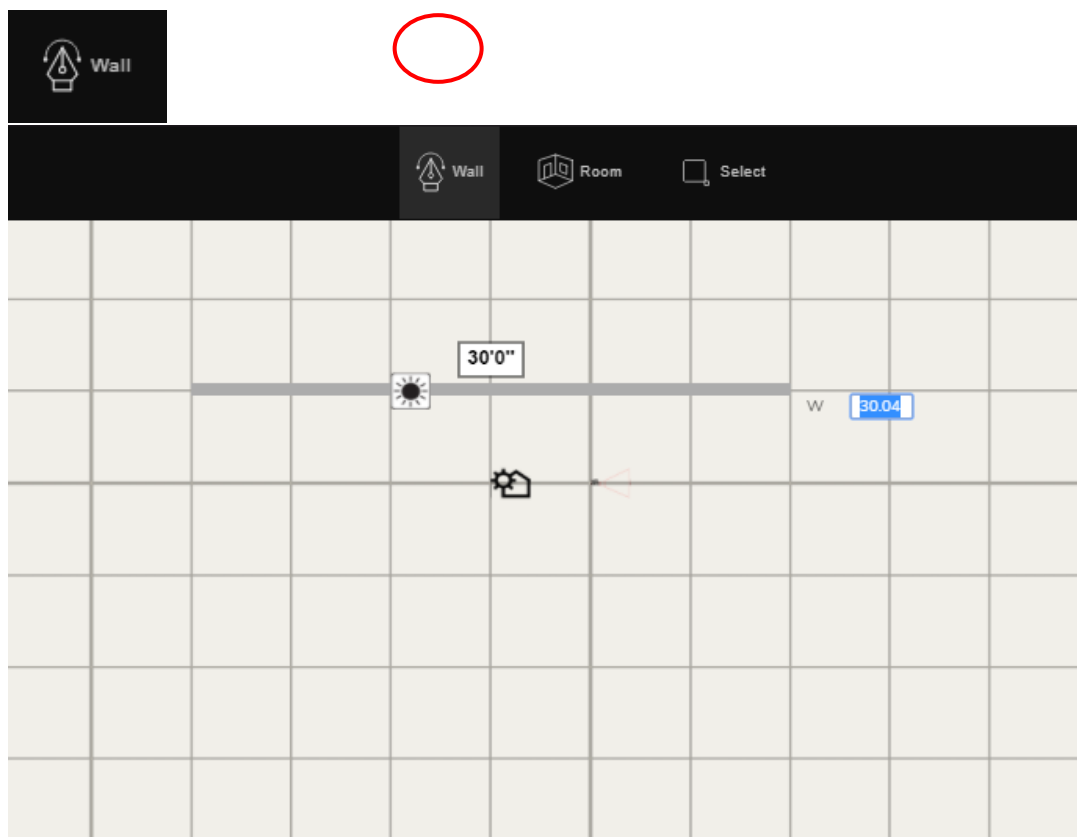

Simplify the process of drawing a floor plan. Foyr | Neo has a Wall tool and Room tool to help you draw floor plans seamlessly and quickly

1. To begin drawing a floor plan, log in to your **Foyr | Neo** account (Hyperlink to show how to log in and add a new project, step 1-5) on www.foyr.com/neo

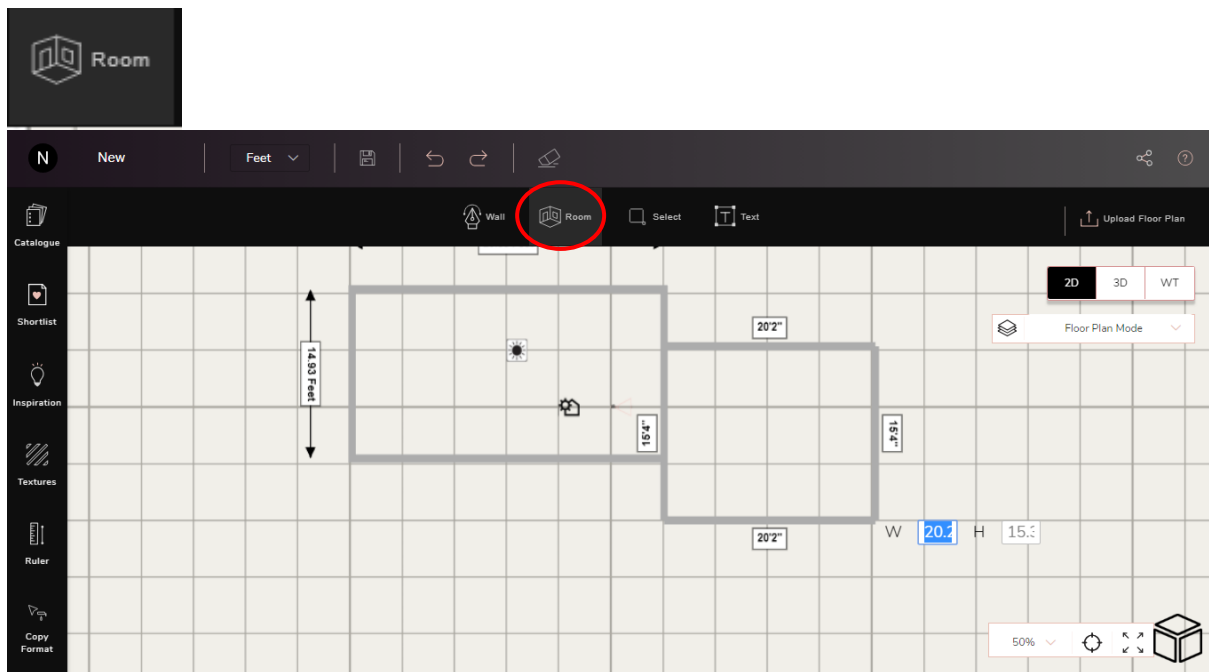

💡 The subsequent steps to draw a floor plan using a wall and room tool can be performed by uploading a floor plan as well. However to draw walls you will be required to use the Wall and room tool trace on the uploaded floor plan. [CLICK HERE](#) to know more

2. To draw a wall, use the **'Wall'** tool on the top tool bar. Click the Wall button and then click and drag from the point where you want to begin drawing the wall.

💡 Learn more about how to upload floor plan by [CLICKING HERE](#)

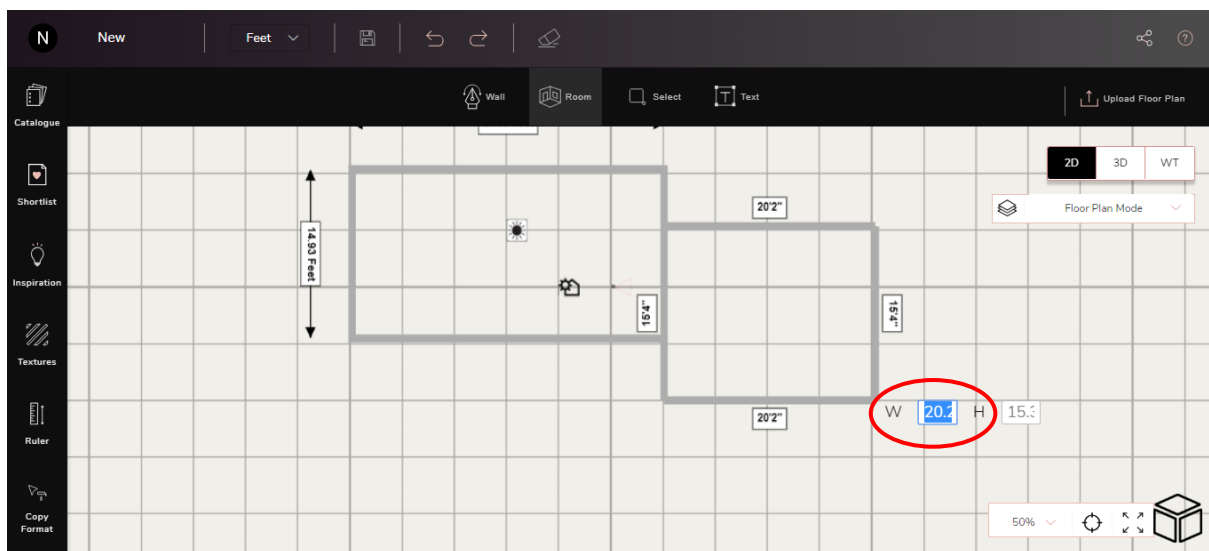

3. You may also use the **Room tool** to draw square and rectangular rooms. Click the Room button and then click and drag from the point where you want to begin drawing the room.

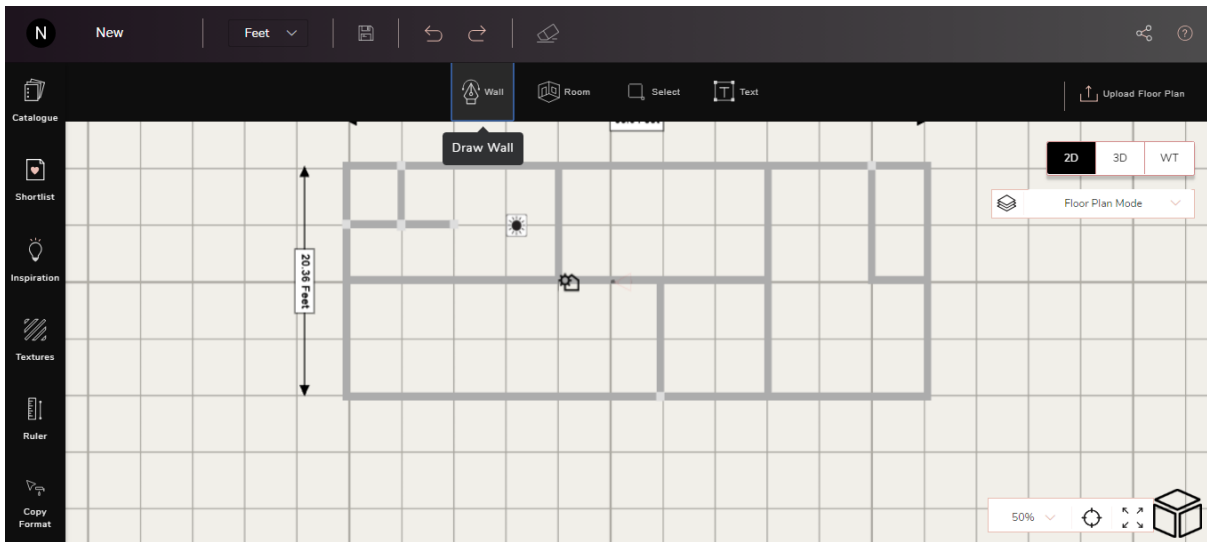

4. For accuracy, you may enter exact dimensions in the text box provided at the corner of the room drawn

For example, to create a room of 20 ft X 20 ft, simply draw a room using the Room tool and then enter 20, 20 in the two text boxes next to the room being drawn.

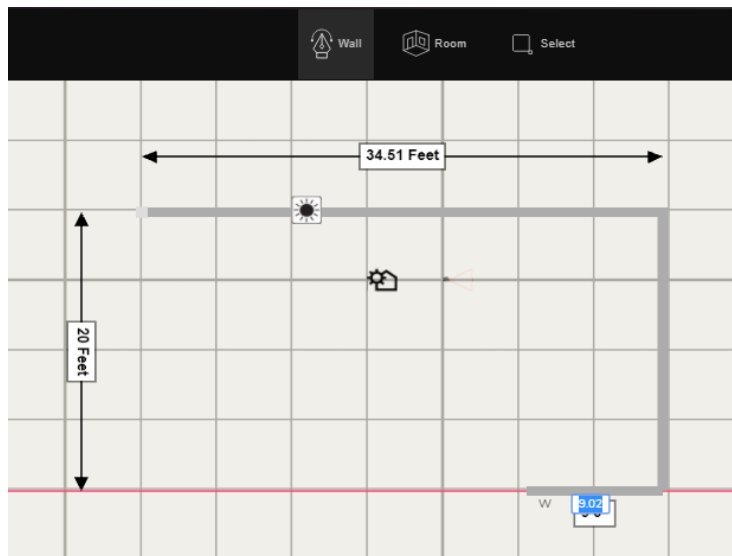

5. You can draw walls from any point on the canvas, within rooms or any point on a wall using the **Wall tool**

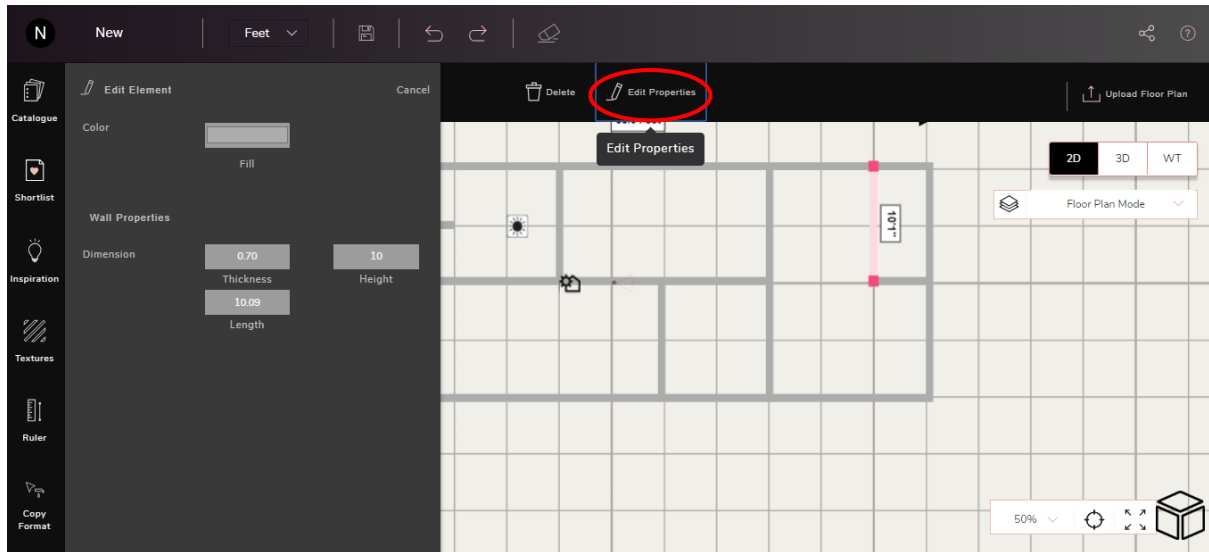

6. You can continue drawing walls as long as you're in Wall tool mode. To help you draw seamless walls, a new wall is automatically started from the point where the last wall ends, as shown below:

 To exit the continuous Wall tool mode, simply click on a blank space on the canvas, or click again on the Wall tool.

7. There are instances where you may need to change the properties such as thickness and appearance of a wall. Just Click on the requisite wall segment and click on **edit properties** on the top contextual bar to change wall dimensions and colour

8. View the floor plan in 3D mode on the right hand side of the page

Drawing a floor plan has many features that are intelligent. Here is a list of some features that make floor plan designing easier:

- **Snapping**—This smart feature of Foyr Neo assists in drawing the perfect floor plan. While drawing a wall, snapping allows the user to start or end the wall exactly at the following points –
 - Edge of a wall/room
 - Corner of a wall/room
 - Orthogonal to a corner of a wall/room
 - In the same line as a wall You can bypass this feature by holding Shift key while drawing a wall
- **Merging** – This tool helps you to merge walls with other walls. Simply click and drag a wall towards another wall and leave it close to the other wall or on it. The two walls will merge together to form a single wall.

- **Surface Detection** – This intelligent feature helps you move around an entire room. Just click on the surface so that the entire surface gets highlighted. You can now move the surface or delete it in one shot.
- **Detach/ Attach surfaces**–The merging feature (defined above) works well with surfaces as well. This feature helps you create, merge and disintegrate spaces according to your design to help you explore symmetry and space.
- **Guidelines** – Guidelines are motion assisted placement and drawing prompts which help you in maintaining symmetry of walls introduced in the floor plan. This is a smart feature of the software which provides assistance in drawing and aligning walls in a floor plan.

You have now learnt '**How to draw floor plan using Wall tool and Room tool from scratch**'. We hope this tutorial guide helped you understand the useful features in **Foyr| Neo**.
