

Overview of Context Bar

What is a context bar?

Context bar is an intelligent menu in Foyr Neo. This is the place where relevant menu items are shown, based on the context where the user currently is. For example, when you are in the floor plan/ 2D mode, you can see the wall tool. When you select an object or furniture, you can see action items relevant to manipulating the object properties.

Context bar in 2D Mode

S.No.	Button/ Tool	Icon
1	Wall Tool - The nib-shaped Wall tool helps you draw straight lines/walls on the floor plan. The tool also provides a text box for you to enter accurate wall length 	
2	Room Tool – The Room tool helps you draw square or rectangular rooms on a floor plan The tool also provides a text box for you to enter accurate room dimensions. For example, to create a room of 20 ft X 20 ft, simply draw a room using the Room tool and then enter 20, 20 in the two text boxes given next to the cursor. 	
3	Select Tool – The Select tool helps you pick and choose multiple items to either group or move together or perform operations which can be applied on all the selected items together.	

		
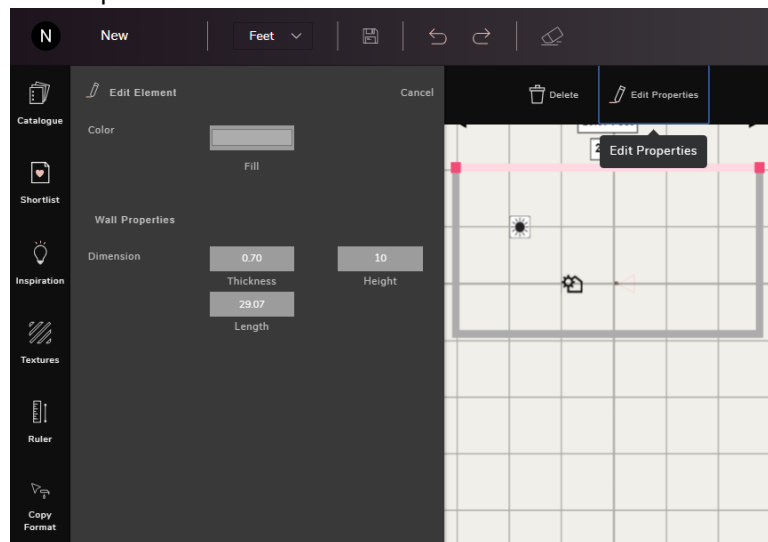

5	Upload Floor Plan – This tool helps you upload your scanned floor plan onto the Neo canvas. Currently, Foyr NEO supports scanned images in JPG/ PNG format only. If you have your floor plan in any other format like Autocad or PDF, you will need to export them first in an image format (or take a snapshot and save it) before using in Foyr Neo. Once you upload the floor plan, this is an easy way for you to trace the floor plan and draw using the wall tool or room tool on top of the floor plan. For more details on how to upload a floor plan, please refer to the help guide on the same subject. 	

Dynamic Features on Context Bar		
7	When you click on one wall segment the context bar changes. An option of Delete and Edit Properties appears	

Edit Properties

Change the wall height, thickness, length and colour with the option of Edit Properties

8

To make changes to a product added to the room

By clicking on any product added to the room, the Context bar changes to enable you to make edits to the product.

The below options help in the following once you:
